INSULCAP®

Insulcap® is a cost-effective product/pallet hood made of strong, thermal insulation material. Insulcap® can provide protection against temperature and weather extremes as well as mechanical damage, such as scuffing.

Temperature regulation occurs through the seven layer Insul® technology, creating the ideal environment for temperature control to occur.

Used during transportation, Insulcap® allows temperature sensitive goods to withstand rapid temperature changes. This is especially useful when necessary breaks such as the loading and unloading of trucks occur and the cold chain is broken.
